

Print systems offering enhanced support of ACCOUNTING4WORK WP

Status: February 2009 - firmware version: 1.93

In general the total counter meter read of each print system directly accessible via the network can be retrieved by ACCOUNTING4WORK WP via SNMP, PjL or PostScript®. For a number of systems an enhanced support is available, which allows to also retrieve e. g. colour counters, function related counters as well as paper format counters.

The continued development of ACCOUNTING4WORK WP not only enhances the software functionality but also the list of systems that support it.

Systems not shown in the attached list, may be included upon request. For more information or additional queries please kindly contact the Support Team at UTAX DocForms GmbH.

Attached you find a list of systems currently supported for which enhanced meter data can be retrieved.

Apart from the listed models of the individual manufacturers higher or lower volume systems as well as newer or older ones may support the same meter reading routines so that additional data may be retrieved. Kindly note that products that are identical in construction may have different brand names.

Errors and omissions excepted.

Systems

TA Triumph-Adler

- DC-series
- DCC-series
- CLP-series
- MFP-series

UTAX

- CD-series
- CDC-series
- CLP-series
- MFP-series
